CSC111 Homework 2
(Due March 30, 2017, in class 2 pages front and back)

NAME:

1. (5 pts) What would be printed from the following program block?
   
   ```
   char s1[10] = "racecar";
   char *s2 = "raceCar";
   int diff;
   diff = strcmp(s1, s2);
   printf(" %d\n", diff);
   ```

2. (6 pts) Fill in the blank boxes to complete the following function.
   
   ```
   int *find_largest(int a[], int n);
   ```
   
   When passed an array a of length n, the function will return a pointer to the array’s largest element.

   ```
   int *find_largest(int a[], int n)
   {
       int i, *largest;

       largest = &a[0];
       for (i = 1; i < n; i++)
       {
           if (a[i] > \[\]
               largest = &a[i];
       }
   return \[\];
   }
   ```

3. (9 pts) Do Exercise #1 in the textbook p.273.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>(b)</td>
<td>(c)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. (6 pts) Do Exercise #3 in the textbook p.308.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>i</td>
<td>j</td>
</tr>
</tbody>
</table>
   |   |   | s
5. (4 pts) Rewrite the following function to use pointer arithmetic instead of array subscripting. Fill in the black boxes to complete the work.

```c
int sum_two_dimensional_array(const int a[][LEN], int n)
{
    int i, j, sum = 0;
    for (i = 0; i < n; i++)
        for (j = 0; j < LEN; j++)
            sum += a[i][j];
    return sum;
}
```

```c
int sum_two_dimensional_array(const int a[][LEN], int n)
{
    int *p, sum = 0;
    for (p = a[0]; p < a[0] \[\]; p++)
        sum += \[\];
    return sum;
}
```

7. (6 pts) We have the following declaration:

```c
typedef enum {ONE = 1, TWO = 2} NUM;

typedef union
{
    char num1;
    int num2;
} UNUM;

typedef struct
{
    float fb;
    NUM num;
    UNUM f;
    float fa;
} SNUM;
```

Given a structure variable named `snum`, write a statement that refers to `num1`. 

```c
```
